LS1 to LS1be upgrade

Our new flagship product LS1be takes the LS1 performance to the next level. We offer existing LS1 customers the unique opportunity to upgrade their system to this stage of performance. In your LS1 the tweeter will be replaced and the electronics upgraded.

The result of this makeover is a serious increase in resolution. The new Beryllium tweeter extends the frequency range and has 9 dB less distortion than our original tweeter. The electronics upgrade includes optimized DSP filtering, lower jitter, improved power supplies, exclusive component selection and silver power supply wiring. We recommend to also add the DMF (digital motional feedback) subwoofer. It has an impressive 30 dB lower distortion, which means the bass area is now just as transparent as the mid and treble.

6Moons commented after their visit to our demo room at High End Munich 2016: "Compared to the original we reviewed, the new iteration was a completely different animal".

Please contact your dealer for further information.

„This is a completely different animal“
