LevelNorm brings the loudness normalization revolution right into your Avid workstation. This AudioSuite plugin is equally suited for Protools, Media Composer and News Cutter systems on Mac or Windows. Compliance to EBU R128 and ATSC A/85 requirements has never been so fast, easy and affordable!

The user interface of LevelNorm is kept as simple as possible so loudness compliance can now be achieved by audio experts as well as video editors with limited audio engineering skills. Normalizing a piece of mono, stereo or multichannel audio is as easy as selecting the region of interest and clicking the 'process' button. The high processing speed of LevelNorm fits perfectly in a hectic production environment with tight deadlines like promo or news item editing.
